

## 1. Name of the product

Optic fiber strand 100 tubes, 2m

## 2. Product code

17905112

## 3. Description

Maximum safety in fiberglass wires, these fiberglow wires made of plastic are the safest option. However, all fiber mist products should only be used under supervision. Only works in combination with a light source (not included). Robust, clear and durable.

## 4. Contents

1x fiber optic strands

A light source is necessary. This must be purchased separately (18517). Therefore, also read the separate instructions for use for the light source. For added safety, the ends of the fiber mist wires have protected tops.

## 5. Sensory stimulations

See

## 6. Safety

Fiber mist products are a constant source of safe tactile and visual stimulation. However, always use them only under professional supervision. Even though it is safe to stroke the threads along the face, never put them in the mouth.

Periodically clean the fiber mist with a clean damp cloth. However, first switch off the light source.

## 7. Installation

1. Remove the packaging and temporary bonds that keep the fibers tied together.
2. Connect the fiber optics to the light source – to do this, insert the button (metal cylinder at the other end of the wires) into the port (metal hollow cylinder) of the light source. See also the instructions for use of the light source. The metal knob is 30mm in diameter, which means that this fiber mist fits all Nenko light sources.

## 8. Start to use

When using a light source with a color wheel, the fiber optics will show a constant color change over the entire length. The changing colors are visually stimulating and encourage focusing. At the same time, they are soothing and relaxing.

The fiber optic strands provide a fascinating tactile stimulation. Some ideas for use are:

1. For example, attach the light source to the wall or in a lined base, with the wires facing down for the effect of a waterfall.
2. Spreads the wires out, and shows that they are safe to touch.
3. Fan out the tops of the threads, to spread a colored light over the hands or face.
4. Spread the wires over a mat and let a person lie or sit on it.
5. Wrap the threads around the limbs or the whole body.
6. Weave the threads through a sweater, apron or net, which can then be draped on a person.
7. Use the fiber optic interactively with our wireless switch controller.

## 9. Maintenance

Fiber mist optics provide great visual and tactile stimulation. However, these products should always be used under targeted adult supervision. Fiber mists are safe when used properly under supervision. Nenko cannot take any liability for damage or injury caused by incorrect use of this product. These fiber optic strands are slightly thicker than the standard fiber optics.

The fiber optic strands can be cleaned by a damp cloth with possibly a mild cleaning agent.

**NOTE:** make sure that the metal button does not become damp. Dry the strands thoroughly before use. Do not hang the fiber strands in water.
